

Quality

Proactive Global is committed to quality and the primary yardstick we use to measure project success is **client satisfaction**. Our commitment to quality is foremost. At Proactive Global, quality is not something that occurs at the time of coding, but begins right at the time of setting client expectations and progresses through every step in the development process. Proactive Global believes **quality is a journey, not a destination**

We achieve this by following proven methodologies and processes as laid down under ISO 9001 and CMM practices
